insights

An aerial night view of the Dubai skyline, featuring numerous illuminated skyscrapers and a body of water in the foreground with several boats docked. The sky is a mix of orange and blue, suggesting dusk or dawn.

The Dubai 10X initiative challenges government entities to think 10 years ahead and develop innovative solutions to the city's challenges.

Selection and Evaluation of Projects

The projects approved as part of the third cycle of the "Dubai 10X" initiative were carefully selected from a pool of 79 project ideas, which were jointly developed by over 120 government employees hailing from 33 different Dubai government entities.

The project ideas in this stage were specialised on the future of government services across a wide range of sectors, including transportation, aviation, space, energy, sustainability, infrastructure, trade, finance, health, security, civil defense, community services, among others.

Some of the key projects include:

- New autonomous transportation system will connect Dubai's key districts.
- A new airport terminal that will use artificial intelligence to streamline the passenger experience.
- A new smart city platform that will provide residents and visitors with personalized services.
- A new healthcare system that will use early disease detection and personalized medicine.

Conclusion

The new projects approved by Sheikh Hamdan are a testament to Dubai's commitment to innovation and future readiness. The projects are expected to have a significant impact on the city's economy, society, and environment.
